# All My Checks™

All My Checks

A Windows™ based software application that finds and extracts check images and MICR information from a variety of scanned and photographed document images and outputs exchange-ready check images along with associated formatted MICR data.

All My Checks automatically processes a folder of scanned documents and extracts check images and MICR information. The check images are processed to conform to exchange standards. All My Checks works with images from flatbed scanners, automated document feeder scanners, mobile cameras and specialty check scanners. The check images can be found among a stream of documents or at any orientation or placement within the document.

All My Checks retrieves image files from a folder, finds check images and extracts MICR information including routing number and ONUS fields. It then outputs banking system compliant black and white TIFF check images along with MICR data in CSV text format.

Check/Document Images → All My Checks → Exchange-Ready Check Images / MICR Data → Optional ICL Creation → ICL/X9.37 FILE (Cash Letters, Bundles, Items, Records, Fields, $$$) ↔ Optional X9 VIEWER

BENEFITS

- Reduce Time/Costs of Check Deposit Processing
  - Every scanner is now a check scanner - no need for a stand-alone check scanner
  - No need to separately scan checks
  - Optional ICL file output
  - Fast processing saves time

- Reduce Cost of Remittance Payment Processing
  - No bursting of checks
  - No separate scan process for checks

- Reduce Work Flow Effort by Eliminating Document Sorts
  - Checks are automatically found within streams of different scanned document types and prepared for exchange

- Reduce Returns
  - Accurate MICR reads with low substitution rates

FUNCTIONS

- Uses a designated folder for incoming documents and check images

- Accepts JPEG or TIFF scanned images

- Automatically detects checks within a document

- Processes check images to ensure conformance with exchange standards

- Extracts routing number and ONUS fields from the MICR line

- Exports check images in exchange-ready binary TIFF format

- Exports MICR data in CSV format

- Optional ICL file output

- Specify item Dollar amount in list file or enter using optional X9-Viewer application

SOLUTIONS

- Single Pass Remittance Capture

- Low Cost Check Capture

- Insurance Premium Remote Capture

- Mobile Phone Capture

All My Checks

A Windows™ based application to find and process check images and extract MICR information from within a folder of scanned checks, document images, scanned remittance documents and check images from mobile phone cameras.

FEATURES

Automatically processes document images from a designated folder

Accepts images from any scanner
- Flatbed scanners
- Dedicated check scanners
- Automatic Document Feeder (ADF) scanners
- Mobile phone cameras

Finds checks on a page or in a mixed stream of scanned documents
- Remittance documents, check images or partial page scans

Finds checks anywhere on the document
- Top, middle or bottom of scanned document or at any angle

Extracts check images from background

Preps and processes check images for exchange standards
- Thresholds, crops, deskews, rotates and registers as needed
- Correlates front and back images
- Converts to black and white TIFF format
- Adjusts to banking standard resolution (200 DPI)

Extracts MICR information from check image

Parses MICR information into routing number and ONUS fields

Command line callable for "lights out" functionality

Electronic endorsement

Capture Dollar amounts and other data from input CSV file

Outputs directly to image cash letter (ICL) file remote deposit capture applications

COMPANION PRODUCT

X9 VIEWER - For entry or editing of MICR or amout data
- A Windows™ based application for viewing, editing and printing Image Cash Letter (ICL) files

SYSTEM REQUIREMENTS
Operating System Windows 10 or Server 2008 or Later, .NET 4.6 or later

RAM Per Operating System Requirements
